StoryCast Research and Planning

Project summary

StoryCast is a 3-page accessible storytelling microsite with supporting story detail pages. The design focuses on semantic HTML, transcripts, captions, and calm editorial spacing.

Information architecture

- Home
- Story detail
- About / Access
- Supporting story pages in /story

Content order

Home: hero, featured stories, categories, accessibility overview, footer

Story detail: banner, media player, story copy, transcript, related stories

About / Access: mission, accessibility features, engagement, contact

Visual direction

- Palette: deep navy, coral, off-white, and dark gray
- Typography: Poppins for headings, Inter for body text
- Layout: editorial spacing, card-based sections, and restrained motion

Accessibility and build notes

Accessibility checklist

- Skip link on every page
- Semantic landmarks and headings
- Keyboard-accessible mobile menu
- Visible focus states
- Transcripts for audio stories
- Captions for video stories
- Meaningful alt text or decorative treatment
- WCAG AA contrast targets
- Grid, Flexbox, and container queries

Build notes

- Static implementation with vanilla HTML, Sass, CSS, and small JS
- Sass tokens live in sass/_colors.scss, sass/_typography.scss, and sass/_spacing.scss
- Compiled CSS is checked in to css/styles.css
- Live story pages embed YouTube videos and pair them with local transcript files

Local preview

- Open index.html directly in a browser, or serve the folder with any static server
