StoryCast Microsite Project

1. INTRODUCTION

StoryCast is a microsite accessible storytelling solution consisting of 3 pages, to present audio and video stories in a structured, semantic and user friendly manner.

The primary objective of this project is to develop a digital story that is accessible to all users, with the ability to captions, provide transcripts, and navigate with accessible patterns.

The site is dedicated to:

1. Semantic HTML structure
2. Accessibility (WCAG AA)
3. Responsive design (CSS modern techniques)
4. Maintainable and clean Sass structure.Maintainable, Clean Sass structure.

2. INFORMATION ARCHITECTUR

The website contains three main pages:

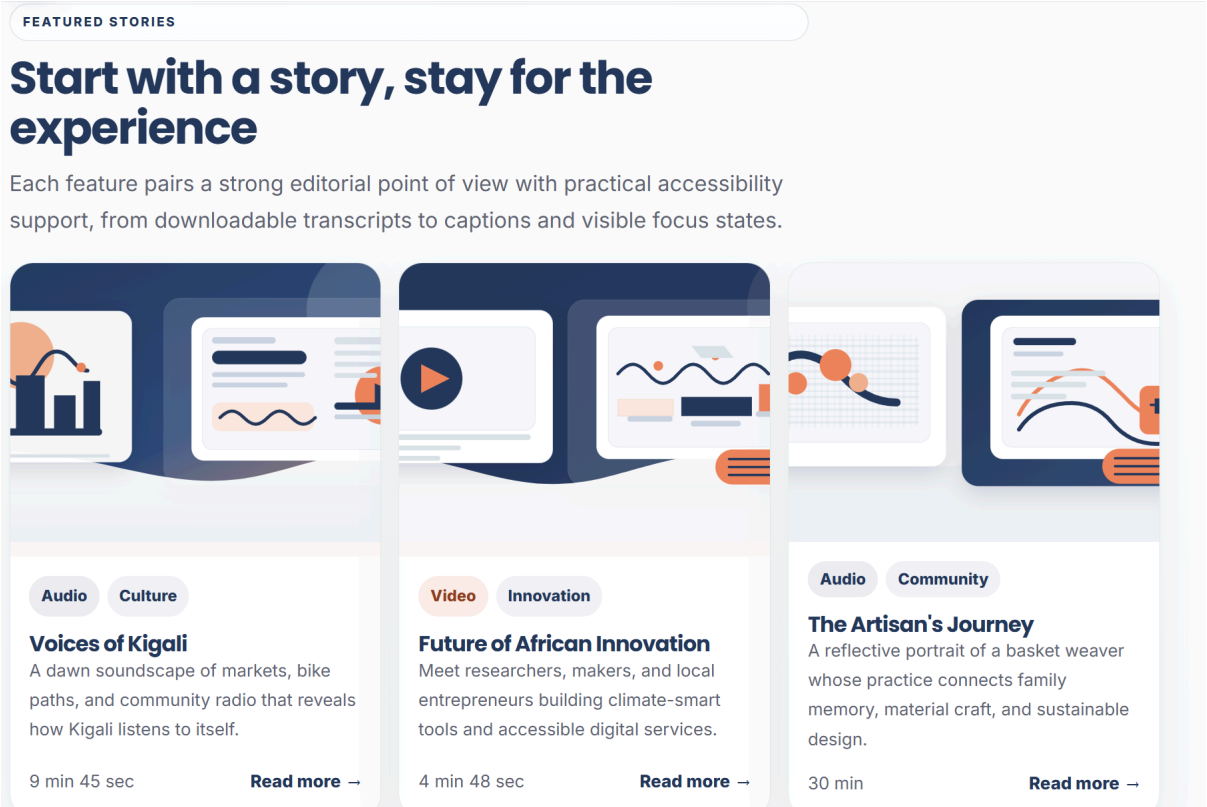

1. Home Page (index.html)
2. Story Page (story/)
3. About Page (about.html)

Sitemap that illustrates the structure and navigation flow of the three pages of StoryCast.

3. HIGH-FIDELITY MOCKUPS

To plan user experience and consistency of layout, the design was created using Figma before the development began.

Story Page Mockup

Embedded video/audio and transcript section on story detail page.

📌 About Page Mockup

Insert: mockups/about.svg

The description of the project mission and accessibility features is found on the about page.

4. DESIGN DECISIONS

It is designed to be simple, clear and accessible.

Layout system

- CSS Grid used for page structure
- Flexbox used for navigation and components

Styling System

- Sass partials used
  - ☐ _colors.scss
  - ☐ _typograph.scss
  - ☐ _spacing.css

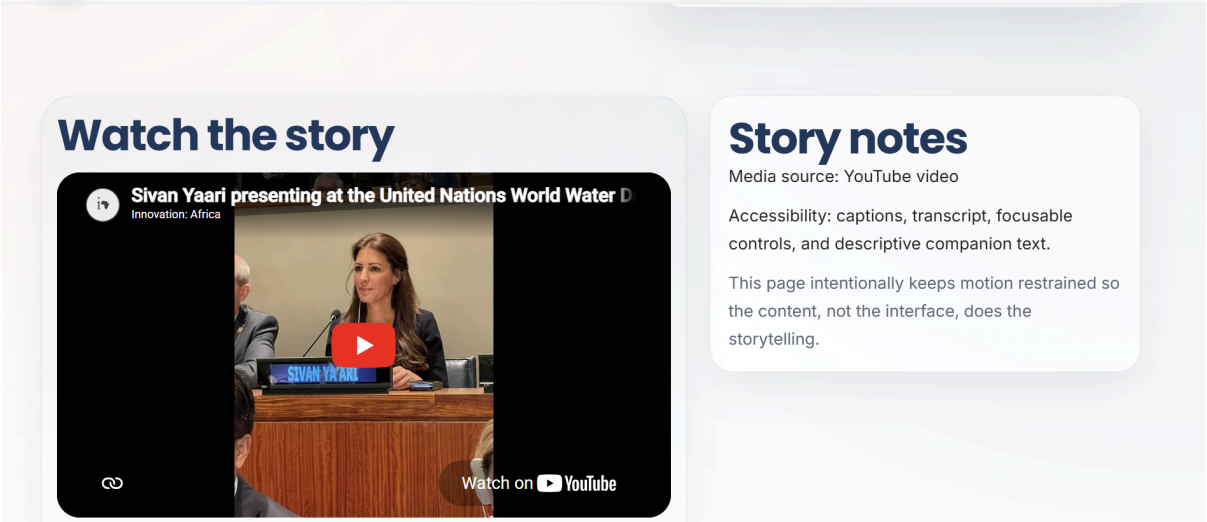

- Design Goals
  - ☐ Clear visual hierarchy
  - ☐ Strong readability and contrast
  - ☐ Clean and minimal layout
  - ☐ Consistent spacing and typography

5. ACCESSIBILITY FEATURES

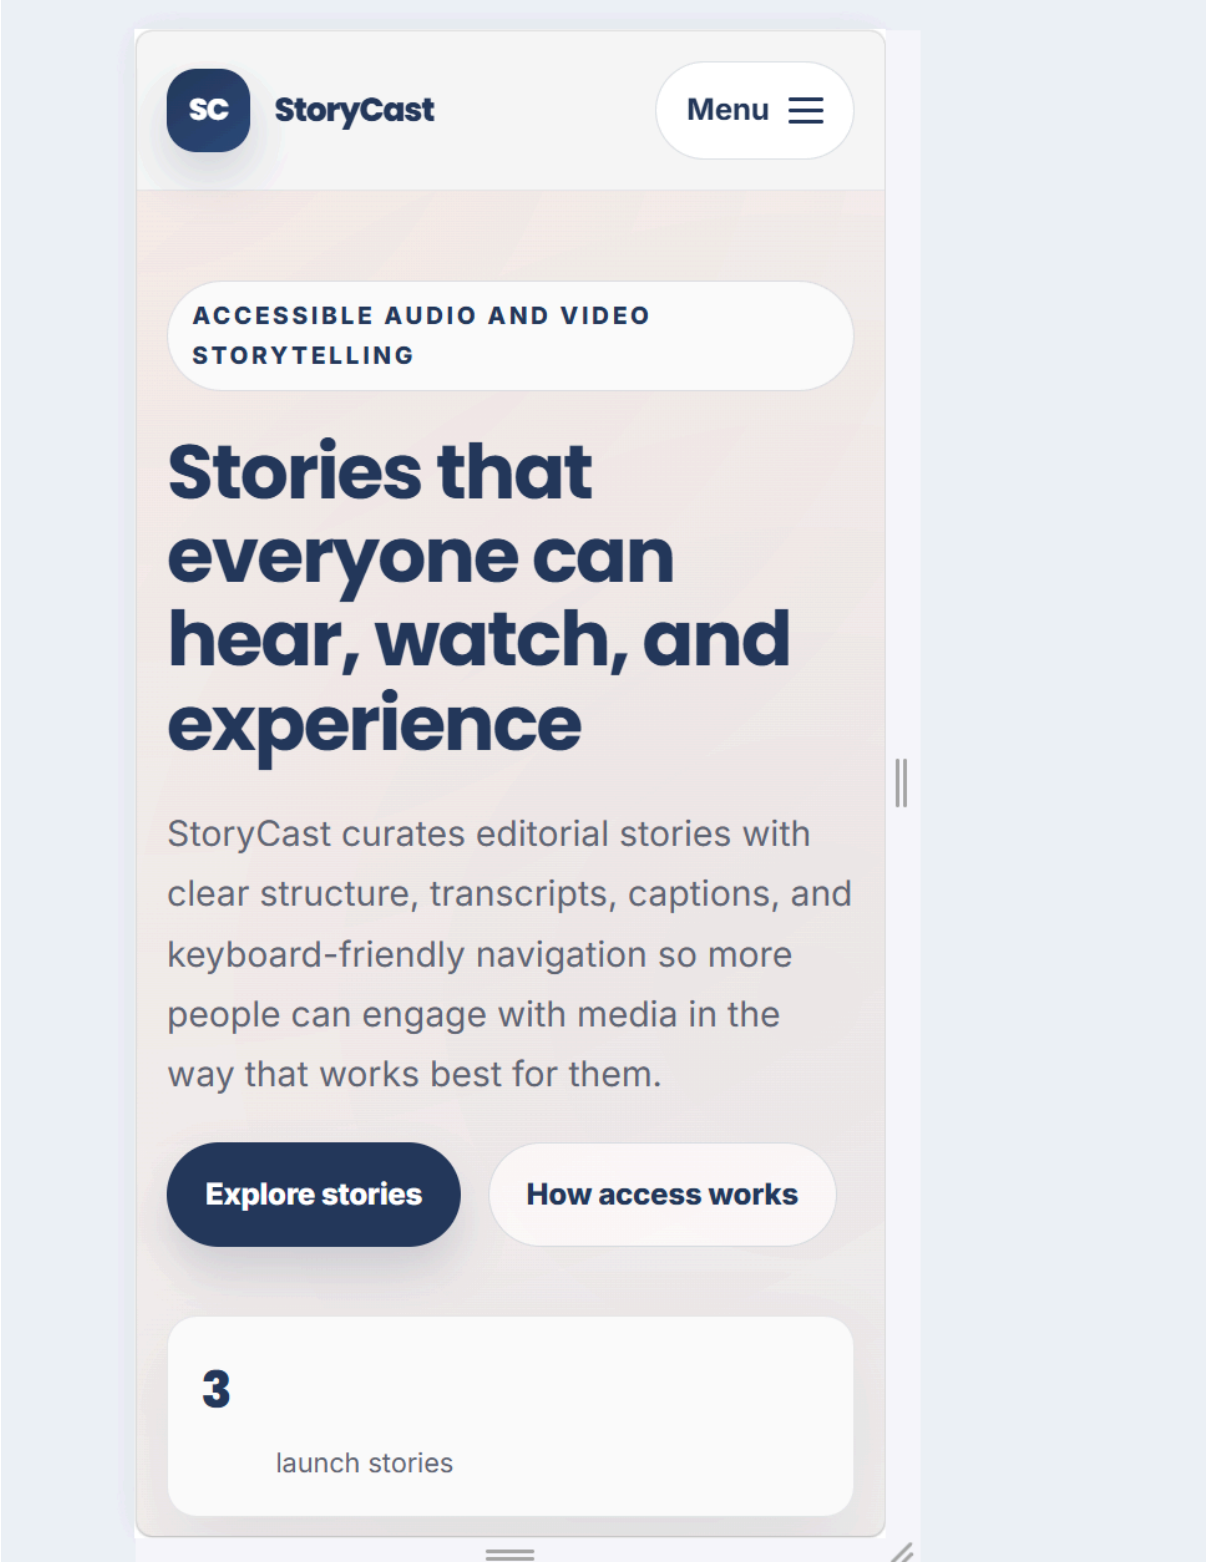

StoryCast was designed to follow the principles of good accessibility .

Implemented Features:

- Skip link for keyboard navigation
- Semantic HTML structure
- Visible focus states for all interactive elements
- Keyboard navigation support.
- ARIA attributes for navigation where needed
- Video caption using <track>
- Audio and videos transcripts for all stories

6. RESPONSIVE DESIGN

Responsive website across all devices.

Techniques Used:

- CSS grid for layout structure
- Flexbox for navigation and cards
- Media queries for mobile,tablet and desktop

7. CONCLUSION

The StoryCast project is an end-to-end accessible and responsive storytelling experience using modern web development techniques.

It successfully combines:

- Semantic HTML structure
- Accessible media integration
- Responsive layout systems
- Modular Sass architecture
-

This project is focused on technical and design skills to create user-centred web design.
